TECHNICAL PROJECTS

Prepp - [Github](#)

Technologies used: React Native, JavaScript, Python, Flask, Expo, Ssqlalchemy

Meal prepping app that allows users to create and add meals to a day in their meal plan.

- React Native front end and Python backend that is built with growth in mind.
- Implemented user authentication with bcrypt and built the site to support full CRUD.
- App is designed to work on the web and iOS.

Kids Meals - [Github](#)

Technologies used: JavaScript, React, Create React App,

Initial version of Prepp that allows users to create and store meals in a local database

- Independently developed a React frontend that is geared towards ease of use for the user
- Utilized custom CSS to create a unique experience.
- Local JSON database that has Create, Read, and Delete functionality.

Yeasty Bois Pizza Portal- [Github](#)

Technologies used: JavaScript, Tailwind, Animista

Pizza ranking application that allows the user to add their own pizza restaurant and leave comments and likes.

- A collaborative project built entirely in JavaScript with a local JSON database
- Utilized Animista, CodePen, Tailwind and custom CSS.
- Local JSON database has Create and Read abilities.
